CAREER OBJECTIVE:

Strong commitment to hard work, eager to contribute 100% effort in any role undertaken. I maintain organizational short-term and long-term goals to ensure consistency and focused growth.

EDUCATION:

-
- B.Tech - AI&ML | Aditya College of Engineering and Technology, Surampalem. | Expected Graduation: 2028 | CGPA: 9.27
 - MPC | Pragati Junior College, Samarlakota - Graduated: 2024 | Percentage: 98.1%
 - SSC | Sri Vignan EM School, Samarlakota - Graduated: 2022 | Percentage: 89.17

TECHNICAL SKILLS:

-
- Programming languages: Python, Java
 - Multimedia: Video editing, Content Writer

STRENGTHS & SOFTSKILLS:

-
- | | |
|------------------------------|-------------------|
| • Self-Motivated | • Time Management |
| • Teamwork and Collaboration | • Adaptability |

PROJECTS:

Aideathon – “Destination Tracker” | 16 September 2025 | [LINK](#)

- Developed a web-based application to help students, visitors, and staff easily identify the correct college bus for their destination.
- Designed a system that maps destinations to available bus routes to reduce confusion for new commuters.
- Implemented an intuitive interface that allows users to quickly search destinations and view the corresponding bus numbers.
- Built using modern web technologies and deployed online for real-time accessibility.
- Improved travel efficiency within the campus transportation system by simplifying route discovery.
- Project Link: <https://destinationtracker.vercel.app>

Multi-Objective Mobile Robot Path Planning Using Hybrid A*–PSO | Research Project | [LINK](#)

- Developed a hybrid mobile robot path planning framework combining A* search and Particle Swarm Optimization (PSO) to generate efficient and safe navigation paths in structured environments.
- Designed a 20×20 grid-based simulation environment with multiple scenarios including sparse obstacles, dense obstacles, narrow passages, and dead-end traps.

- Implemented multi-objective optimization considering path length, smoothness (number of turns), and obstacle clearance to improve navigation quality.
- Compared the proposed Hybrid A*–PSO method with Multi-Objective A* and Multi-Objective PSO algorithms for performance evaluation.
- Conducted 30 independent experimental runs to analyze success rate, computation time, and path stability across different map environments.
- Achieved 100% navigation success rate with improved stability and smoother trajectories, demonstrating the effectiveness of deterministic–stochastic hybrid planning.

CERTIFICATIONS:

-
- Certificate of participation - Creathon, organized by EDC & IIC | 21 April 2025 | [LINK](#)
 - Certificate of Participation – Aideathon | 16 September 2025 | [LINK](#)
 - Oracle Generative AI Certification – Issued by Oracle | 26 October 2025 | [LINK](#)
 - Certificate of Participation – HackSprint, GeeksforGeeks | 11 December 2025 | [LINK](#)
 - Python essential_1 Certification – Issued by Cisco | 28 December 2025 | [LINK](#)
 - Python essential_2 Certification – Issued by Cisco | 7 January 2026 | [LINK](#)
 - Quantum Fundamentals Certification – Issued by WISER, Amaravati Quantum Valley & Qubitech | 22 February 2026 | [LINK](#)

ACHIEVEMENTS:

Participated in a National-level Creathon focused on innovative design thinking | 21 April 2025
